

# 25% price reduction on Unisab III

**Unisab III compressor controller on sale for six months.**

The Unisab III refrigeration systems controller is the first of a new generation of extremely versatile control units that take the whole idea of connectivity between compressor equipment and remote monitoring and control units to a completely new level. It is an integrated solution that brings considerable added value – as well as big reductions in operating costs – to any refrigeration system.

## Significant advantages

- Compatible with virtually all types and makes of refrigeration compressor equipment currently available. Also compatible with previous-generation Unisab II controller units.
- Easy to integrate into the vast majority of industrial control systems, with no need for expensive additional equipment.
- Compressor sequencing and load sharing are possible without additional equipment.
- Monitoring, control and diagnostics capabilities combined in one compact, integrated design.

## Customer benefits

- Makes sure that refrigeration installations have the best possible performance, maximum uptime and lowest possible operating costs.
- Seamless transfer of data between systems ensures effective monitoring, control and diagnostics.
- Optimised, energy-saving operation of multiple compressors keeps power consumption to a minimum and reduces operating costs.
- A single integrated control solution does away with the need for additional equipment, resulting in significant savings on installation costs.

A discounted upgrading solution for Unisab II is also available.
